# Parts list 2

★ = Variation Number

slope250cm★\_parts

slope500cm★\_parts

slopecurveA250cm★\_parts

slopecurveB250cm★\_parts

slopeforkedA250cm★\_parts

slopeforkedB250cm★\_parts

slopeforkedC250cm★\_parts

slopeforkedD250cm★\_parts

slopeforkedE250cm★\_parts

slopeforkedF250cm★\_parts

slopecrossA250cm★\_parts

slopecrossB250cm★\_parts

slopecrossC250cm★\_parts

slopecrossD250cm★\_parts

mlcrossingA500cm★\_parts

mlcrossingpassA500cm★\_parts

mlcrossingB500cm★\_parts

mlcrossingpassB500cm★\_parts

example :

slope250cm1\_parts

slopecurveA250cm1\_parts

mlcrossingC500cm1\_parts

# Slope Parts

- It expresses that the brighter the blue part is, the higher the ground is
- Prefabricated name includes height information (250 cm etc)

# Multi-level crossing Type Parts

- It is the part where the passage crosses in 1 part
- Prefab name contains crossing height information (500 cm etc)
- “mlcrossingpass” can get down from the top  
( “mlcrossing can” not get down)

Can not get down :

Can get down from the green mark :

# Rule of arrangement Part 1

Map Series 2 : [https://www.catstudio.jp/ua\\_mapseries2.html](https://www.catstudio.jp/ua_mapseries2.html)

If the marks at the end of the road are the same color, they will be connected.

It can be rotated every by 90 degrees and placed.

Type placed

Angle of the placed part

# Rule of arrangement Part 2

Map Series 2 : [https://www.catstudio.jp/ua\\_mapseries2.html](https://www.catstudio.jp/ua_mapseries2.html)

Please be careful about the height of the connecting part when using the slope parts.

This is an example of connecting six "slope250cm" parts with a height difference of 250cm

✓ OK

✗ NG

# Rule of arrangement Part 3

Assets used : Grid Map 2 for FREE - Map Series 2 -  
[https://www.catstudio.jp/ua\\_ms2\\_gridmap2forfree\\_en.html](https://www.catstudio.jp/ua_ms2_gridmap2forfree_en.html)

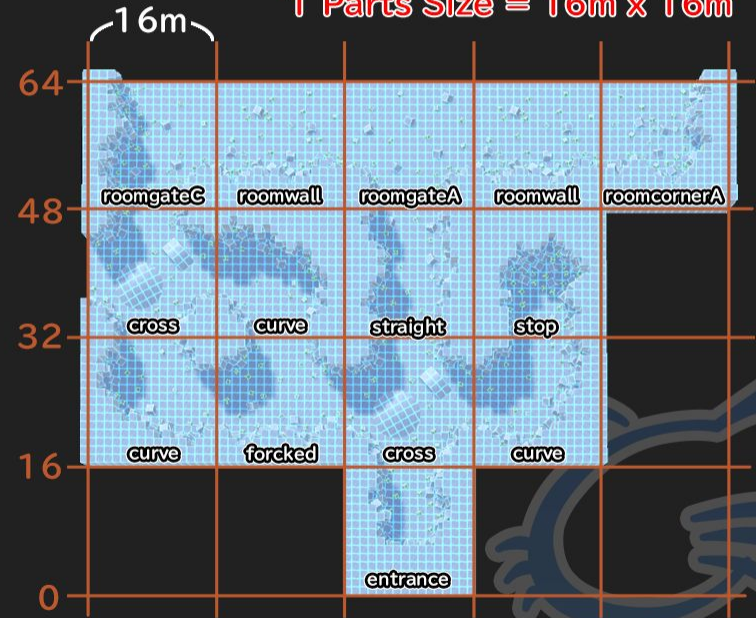

## Arrangement example

( Please pay attention to "file name" and "mark" )

An example in which a prefab file is arranged with reference to the left figure

1 Parts Size = 16m x 16m

# Collision

- Object Collision (Name : col\_o) : It is a collision close to the appearance object
- Wall Collision (Name : col\_w) : It is a collision that becomes a wall
- Partition Collision (Name : col\_p) : It is a collision that is blocking a place where you can not go, such as a gateway

Example:

col\_w can be used to judge that the character strikes the ground and  
col\_o can be used to judge against bullets, magic and the like.

# Texture

Size : Max 2048 × 2048

Type : Color Texture, Normal Map

You can change the texture size  
with Unity's Inspector

# Folder structure

▼ Assets	
▼ CatStudio	Purchased and imported Character Series assets will be added here
▶ Maps	Purchased and imported Map Series 1 assets will be added here
▼ MapSeries2	Purchased and imported Map Series 2 assets will be added here
▶ GreatDragonWall	It will be added when you import other map series
▶ MiningTunnel	
▼ SadForest	Asset name
▶ Document	Readme and manual
▶ Effect	Effect materials and textures
▶ Model	FBX files, materials and textures such as ground and arranged objects
▶ PPS	Post Processing Stack data
▼ Prefab	Prefab files are located under this folder
▶ Effects	Includes effect prefab
▶ Map	Includes map prefab file of sample with part prefab file placed
▶ MapParts	Includes ready-to-use parts pre-assembled in the 16 m x 16 m range
▶ Objects	Includes object prefab file that prefabricated each fbx file
▶ Sample	Sample scenes
▶ SampleContents	Contains scripts and files to share and use in the sample scene

Map Series 2: [https://www.catstudio.jp/ua\\_mapseries2.html](https://www.catstudio.jp/ua_mapseries2.html)

# Universal Render Pipeline(URP) shader

---

How to convert:

- Since StandardShader is used, please convert it to URP shader using the function of Unity.

Edit / Render Pipeline / Universal Render Pipeline

# How to use Post Processing Stack data

---

- 1: Import Post Processing from Package Manager
- 2: Double-click the package file in the PPS folder to import it
- 3: Change Color Space to Linear (Edit / Project Settings / Color Space)
- 4: Open the sample scene in the PPS folder

## Note:

- PostProcessingStack data was created with version 3.0.1.

# Series comparison

		<div>2</div> <div>Map Series</div>
	- Map Series 1 -	- Map Series 2 -
Gateway Type	✓	✓
Road Type	✓	✓
Room Gate Type	✓	✓
Room Type	✓	✓
Slope Type		✓
Multi-level crossing Type		✓
0, 90, 180, 270 degrees. 4 rotated map parts	✓	
Map parts can be placed rotated every by 90 degrees	△ ※1	✓
Unity 2018.4 or later		✓

※1 There is also a map part that supports it, but please use a dedicated map part.
